<b>Preface</b>	<b>vii</b>
<b>1 The wavelet transform</b>	<b>1</b>
1.1 Multiscale methods . . . . .	1
1.1.1 Some perspectives on the wavelet transform . . . . .	2
1.1.2 The wavelet transform and the Fourier transform . . . . .	5
1.1.3 Applications of the wavelet transform . . . . .	7
1.2 The continuous wavelet transform . . . . .	8
1.2.1 Definition . . . . .	8
1.2.2 Properties . . . . .	8
1.2.3 The inverse transform . . . . .	9
1.3 Examples of wavelet functions . . . . .	9
1.3.1 Morlet's wavelet . . . . .	9
1.3.2 Mexican hat . . . . .	10
1.3.3 Haar wavelet . . . . .	10
1.4 The discrete wavelet transform . . . . .	12
1.4.1 Multiresolution analysis . . . . .	13
1.4.2 Mallat's horizontal and vertical analyses . . . . .	16
1.4.3 Non-dyadic resolution factor . . . . .	20
1.4.4 The à trous algorithm . . . . .	24
1.4.5 Pyramidal algorithm . . . . .	35
1.4.6 Scaling functions with a frequency cut-off . . . . .	39
1.4.7 Discussion of the wavelet transform . . . . .	43
1.5 Multiresolution and median transform . . . . .	45
1.5.1 Multiresolution median transform . . . . .	45
1.5.2 Pyramidal median transform . . . . .	46
1.5.3 Iterative pyramidal median transform . . . . .	47
1.5.4 Non-iterative pyramidal transform with exact reconstruction . . . . .	47
1.5.5 Conclusion on multiscale median transforms . . . . .	48
1.6 Multiresolution and mathematical morphology . . . . .	48
1.6.1 Multiresolution . . . . .	49
1.6.2 Pyramidal morphological transform . . . . .	49

1.6.3	Conclusions on non-wavelet multiresolution approaches	50
<b>2</b>	<b>Multiresolution support and filtering</b>	<b>51</b>
2.1	Noise modeling	51
2.1.1	Definition of significant coefficients	51
2.1.2	Gaussian noise	52
2.1.3	Poisson noise	53
2.1.4	Gaussian and Poisson noise	55
2.1.5	Poisson noise with few photons or counts	57
2.1.6	Other types of noise	59
2.2	Multiresolution support	60
2.2.1	Definition	60
2.2.2	Multiresolution support from the wavelet transform	61
2.2.3	Algorithm	61
2.2.4	Gaussian noise estimation from the multiresolution support	63
2.2.5	Concluding remarks on the multiresolution support and noise	64
2.3	Filtering	67
2.3.1	Convolution using the continuous wavelet transform	67
2.3.2	Wiener-like filtering in wavelet space	69
2.3.3	Hierarchical Wiener filtering	70
2.3.4	Adaptive filtering	72
2.3.5	Examples	75
2.4	Multiresolution image comparison	82
<b>3</b>	<b>Deconvolution</b>	<b>85</b>
3.1	Introduction to deconvolution	85
3.2	Regularization using multiresolution support	87
3.2.1	Noise suppression based on the wavelet transform	87
3.2.2	Noise suppression based on the multiresolution support	88
3.2.3	Regularization of Van Cittert's algorithm	88
3.2.4	Regularization of the one-step gradient method	89
3.2.5	Regularization of the Richardson-Lucy algorithm	89
3.2.6	Convergence	89
3.2.7	Examples from astronomy	89
3.2.8	Conclusion on regularization using the multiresolution support	98
3.3	Multiscale entropy and image restoration	99
3.3.1	Image restoration using the maximum entropy method	100
3.3.2	Formalism of maximum entropy multiresolution	103
3.3.3	Deconvolution using multiscale entropy	105
3.3.4	Experiments	106
3.3.5	Another application of multiscale entropy: filtering	110

3.3.6	Conclusion on multiscale entropy and restoration . . .	111
3.4	Image restoration for aperture synthesis . . . . .	112
3.4.1	Introduction to deconvolution in aperture synthesis . .	112
3.4.2	CLEAN and wavelets . . . . .	115
3.4.3	Experiment . . . . .	120
3.4.4	Observations of two evolved stars . . . . .	121
3.4.5	Conclusion on interferometric data deconvolution . . .	126
<b>4</b>	<b>1D signals and Euclidean data analysis</b>	<b>129</b>
4.1	Analysis of 1D signals: spectral analysis . . . . .	129
4.1.1	Spectral analysis . . . . .	129
4.1.2	Noise determination and detection criteria . . . . .	129
4.1.3	Simulations . . . . .	130
4.1.4	Problems related to detection using the wavelet trans- form . . . . .	132
4.1.5	Band extraction . . . . .	134
4.1.6	Continuum estimation . . . . .	135
4.1.7	Optical depth . . . . .	138
4.1.8	The multiresolution spectral analysis algorithm . . . .	140
4.2	Wavelets and multivariate data analysis . . . . .	142
4.2.1	Wavelet regression in multivariate data analysis . . . .	142
4.2.2	Degradation of distance through wavelet approximation	144
4.2.3	Degradation of first eigenvalue through wavelet filtering	146
4.3	The Kohonen map in wavelet space . . . . .	147
4.3.1	Example of SOFM in direct and in wavelet spaces . .	149
4.3.2	K-means and principal components analysis in wavelet space . . . . .	150
4.4	Multiresolution regression and forecasting . . . . .	155
4.4.1	Meteorological prediction using the à trous method . .	155
4.4.2	Sunspot prediction using à trous and neural networks	158
4.4.3	Dynamic recurrent neural network architecture . . . .	158
4.4.4	Combining neural network outputs . . . . .	159
<b>5</b>	<b>Geometric registration</b>	<b>163</b>
5.1	Image distortions . . . . .	164
5.1.1	Geometrical distortions . . . . .	164
5.1.2	Radiometrical distortions . . . . .	164
5.2	Geometrical image registration . . . . .	166
5.2.1	Deformation model . . . . .	167
5.2.2	Image correction . . . . .	168
5.3	Ground control points . . . . .	169
5.4	Registration using the wavelet transform . . . . .	171
5.4.1	Registration of images from the same satellite detector	171
5.4.2	Registration of images from different sensor detectors	172

5.4.3	Registration of images with a pyramidal algorithm . .	174
5.5	Application . . . . .	177
5.5.1	SPOT data . . . . .	177
5.5.2	MSS data . . . . .	183
5.5.3	SPOT versus MSS data . . . . .	185
5.5.4	SPOT with different imaging directions . . . . .	188
5.5.5	Astronomical image registration . . . . .	190
5.5.6	Field of view distortion estimation in ISOCAM images	191
5.6	Error analysis . . . . .	194
5.7	Conclusion on registration . . . . .	197
<b>6</b>	<b>Disparity analysis in remote sensing</b>	<b>199</b>
6.1	Definitions . . . . .	199
6.1.1	Disparity . . . . .	200
6.1.2	Matching . . . . .	201
6.1.3	Extraction of ground control points . . . . .	202
6.2	Disparity mapping . . . . .	202
6.2.1	Kriging . . . . .	202
6.2.2	Variogram . . . . .	203
6.2.3	Kriging as an interpolator . . . . .	208
6.3	Disparity mapping with the wavelet transform . . . . .	211
6.4	Image registration . . . . .	215
6.5	Application to real images . . . . .	218
6.6	Conclusion on disparity analysis . . . . .	226
<b>7</b>	<b>Image compression</b>	<b>229</b>
7.1	Pyramidal median transform and compression . . . . .	230
7.1.1	Compression method . . . . .	230
7.1.2	Quantized multiresolution coefficients . . . . .	231
7.1.3	Quadtree and Huffman encoding . . . . .	232
7.1.4	Noise compression . . . . .	232
7.1.5	Image decompression . . . . .	232
7.2	Examples and assessments . . . . .	233
7.3	Image transmission over networks . . . . .	239
7.4	Conclusion on image compression . . . . .	242
<b>8</b>	<b>Object detection and point clustering</b>	<b>243</b>
8.1	The problem and the data . . . . .	243
8.2	Median transform and Minkowski operators . . . . .	244
8.3	Conclusion on astronomical object detection . . . . .	246
8.4	Clustering in point patterns . . . . .	247
8.4.1	Example 1: excellent recovery of Gaussian clusters . .	247
8.4.2	Example 2: diffuse rectangular cluster . . . . .	249
8.4.3	Example 3: diffuse rectangle and faint Gaussian clusters	252

8.5	Conclusion: cluster analysis in constant time . . . . .	253
<b>9</b>	<b>Multiscale vision models</b>	<b>255</b>
9.1	Artificial vision and astronomical images . . . . .	255
9.2	Object definition in wavelet transform space . . . . .	256
9.2.1	Choice of a wavelet transform algorithm . . . . .	256
9.2.2	Bases of object definition . . . . .	256
9.2.3	Significant wavelet coefficients . . . . .	257
9.2.4	Scale-by-scale field labeling . . . . .	257
9.2.5	Interscale connection graph . . . . .	258
9.2.6	An object as a tree . . . . .	258
9.2.7	Object identification . . . . .	260
9.3	Partial reconstruction . . . . .	260
9.3.1	The basic problem . . . . .	260
9.3.2	Choice of the scale number . . . . .	261
9.3.3	Reconstruction algorithm . . . . .	262
9.3.4	Numerical experiments . . . . .	264
9.4	Applications to a real image . . . . .	268
9.4.1	Multiscale method . . . . .	268
9.4.2	INVENTORY method . . . . .	271
9.4.3	Comments . . . . .	271
9.5	Vision models and image classes . . . . .	273
<b>A</b>	<b>Variance stabilization</b>	<b>275</b>
A.1	Mean and variance expansions . . . . .	275
A.2	Determination of centered moments . . . . .	276
A.3	Study of the expansions for the variance . . . . .	277
A.4	Variance-stabilizing transformation . . . . .	277
<b>B</b>	<b>Software information</b>	<b>279</b>
<b>C</b>	<b>Acronyms</b>	<b>283</b>
	<b>Index</b>	<b>305</b>
